Peter Swenson, Chief
Watersheds and Wetlands Branch
U.S. EPA Region 5
77 West Jackson Blvd. (W-15J)
Chicago, Illinois 60604-3507

Dear Mr. Swenson:

I am providing an amendment to the final Ohio 2016 Integrated Water Quality Monitoring and Assessment Report for U.S. EPA's review and approval under Section 303(d) of the Clean Water Act. The amendment includes assessments and listings for the open waters of Lake Erie based on algae.

The enclosed amendment includes a description of the waterbody(s), the new recreation use assessment method and data considered, as well as a revised status list and 303(d) list with priority points assigned. Ohio's intentions for addressing the impairment are also discussed.

Please contact Cathy Alexander (614-644-2021) of the Division of Surface Water if you need additional information. We look forward to your approval.

Sincerely,

A handwritten signature in blue ink, appearing to read "Tiffani Kavalec".

Tiffani Kavalec, Chief
Division of Surface Water
Ohio EPA

cc: Chris Korleski, Director, Water Division, U.S. EPA Region 5

Enclosure

Ohio is amending the 2016 Integrated Water Quality Report to enhance the assessment and impairment listings related to algae in Lake Erie. This amendment includes a new section F.4 below which describes the recreation assessment method based on algae developed to date, a list of subsections/paragraphs in the 2016 which are replaced by this amendment, and a revised list of impaired waters with priority points assigned.

F.4 Recreation Assessment for Algae in Western Lake Erie

F.4.1 Background

A healthy Lake Erie is a vital component of Ohio's economic and ecological health. Funding under the Great Lakes Restoration Initiative (GLRI) and other sources has led to the availability of new data and opportunities to expand assessment and reporting of water quality conditions in Lake Erie. The combined data set, along with advances in the use of satellite imagery to detect and track algal blooms, allowed Ohio to add to the 2018 report the first phase of a method to assess the open waters of Lake Erie for recreational impairment caused by algae. Upon review of the results, it became clear that this new method could also be used to assess and list the open waters for the 2016 report to resolve the pending litigation.

Regarding data availability, it is important to keep in mind that Ohio's credible data law (ORC 6111.50 to 6111.56) requires Level 3 credible data for impairment assessments and decisions. However, Ohio EPA cannot compel data collectors to apply for Level 3 status. Thus, while many parties may be collecting data in Lake Erie, much of it is not currently useable in IR assessments. Data requirements and the credible data law are also discussed in Section D3 of this report.

F.4.2 Rationale and Evaluation Method

Identifying Sources of Data

As specified in the Ohio credible data law 2003 (ORC 6111.50 to 6111.56), Ohio EPA is limited to data certified as Level 3 when making attainment determinations for Ohio waters. Data types may be applicable only for specific beneficial uses or AU types (for example, shoreline versus offshore AUs). Ohio EPA has established that the Northeast Ohio Regional Sewer District (NEORSD) data through 2016 is Level 3 credible data, and the NOAA satellite information has been reviewed to ensure that it meets the credible Level 3 requirements. Ohio EPA will continue evaluating protocols and data from U.S. EPA, NOAA, U.S. Geological Survey, the Ohio State University and the University of Toledo to ensure more Level 3 data is available for future assessments.

Through the efforts of GLWQA Annex 4 workgroups and Ohio EPA staff, a list of data collectors in the western basin was compiled, along with information related to the sample collection and analysis. The table below presents a summary of the data available that is currently eligible for use by Ohio EPA to determine attainment, data that Ohio EPA anticipates could easily be approved as credible data Level 3 (upon protocol and data review), as well as limitations to the use of the data in a reasonable assessment of a large body of water such as Lake Erie where algae blooms shift and change significantly over a season.

Establishing Expectations: Targets for Lake Erie Algal Blooms

A common means to estimate algal productivity and trophic status is to measure the photosynthetic pigment chlorophyll a in a filtered water sample. The importance of phosphorus as the limiting nutrient that feeds algae blooms is also recognized. Ohio does not have numeric criteria for these constituents in Lake Erie and no federal criteria have been established to date. Also, the GLQWA Annex 4 committees and workgroups recognized that measuring nutrient levels in the lake may not be the best way to track success

in reducing algal blooms. Ohio water quality standards (OAC 3745-1-04) do contain narrative requirements that all surface waters be:

"(D) Free from substances entering the waters as result of human activity in concentrations that are toxic or harmful to human, animal or aquatic life or are rapidly lethal in the mixing zone.

(E) Free from nutrients entering the water as a result of human activity in concentrations that create nuisance growths of aquatic weeds and algae."

Ohio EPA has collaborated with representatives from the Ohio State University Sea Grant College Program, University of Toledo, Bowling Green State University and NOAA to develop a reasonable, objective assessment method for the western basin open water using targets that will meet the goals established by the GLWQA Annex 4 committee and provide assurance that the WQS are met.

The foundation of the first phase of Ohio's assessment method for algae is an evaluation of the western basin algae bloom pattern over time, such as that conducted by NOAA in 2012 (Stumpf, 2012). Data sets from the MODIS satellite (2012 to 2017) were used for this assessment. The GLWQA Annex 4 committee set goals for phosphorus loadings to the lake at levels that are expected to produce a bloom no greater than those which occurred in 2004 or 2012. So, the extent of algal bloom coverage considered acceptable, or attaining the recreation use designation, should be no greater than that in 2004 or 2012. In addition, the algal cell count level in the bloom should be no greater than 20,000 cells/ml. Densities of 20,000 cells/ml (and even lower) have been shown to cause health effects that are clearly linked to the cyanobacteria density and not just the microcystin levels (WHO 1999, 2003). This density (20,000 cells/ml) corresponds to the nominal "floor" used by NOAA to analyze satellite images with a comfortable degree of certainty (Wynne and Stumpf, 2015).

To account for the way that algae blooms shift in time and space in a large body of water like the western basin, the method developed is as follows:

- In each 10-day frame, an exceedance means bloom coverage at 20,000 cells/ml is greater than 30 percent of the western basin open water unit area
- If more than three 10-day frames are exceeded in one year (July-Oct.) then that year "exceeds"
- If any two or more years in a rolling six-year window "exceeds" then it is impaired

Data collected in Ohio waters of Lake Erie that is credible level 3 or could likely be approved as level 3 with review and coordination.

| Agency/Collector | Geographic Location | Start/End Date | Sampling Frequency | Parameters analyzed | Basin | Limitations/Notes | Eligible for IR use? |
|----------------------|---|----------------|-----------------------|--|---------|--|---------------------------|
| U.S. EPA | Offshore/near shore – 9 sites in central basin; only 3-7 in OH waters | 1983-present | Spring, Summer | Phytoplankton, zooplankton, nutrients, chlorophyll, water quality parameters | Central | 2 samples/ year unless intense survey year | potential |
| U.S. EPA | Offshore/near shore – 3 sites in western basin OH waters | 1983-present | Spring, Summer | Phytoplankton, zooplankton, nutrients, chlorophyll, water quality parameters | West | 2 samples/ year unless intense survey year | potential |
| NOAA | All Lake Erie | 2002-present | clear days | cyanobacterial chlorophyll | All | | yes (2012 forward) |
| ODNR-Sandusky Sister | South of Middle Sister Toledo Water Intake | May - Sept | bi-weekly | Chl-A, Species, Phosphorus | West | only P data is confirmed level 3 | yes for P, rest potential |

| Ohio EPA | Lake Erie near Cedar Point | 2011-2015 | phytoplankton 3/yr, chemistry/field monthly | nutrients, for more see list in footnote (1) | SB | close to shore, no longer being collected | yes |

| Agency/Collector | Geographic Location | Start/End Date | Sampling Frequency | Parameters analyzed | Basin | Limitations/Notes | Eligible for IR use? |
|---|---|----------------|---|--|---------|---|----------------------|
| Ohio EPA | Lake Erie near City of Sandusky WTP Intake | 2016-present | phytoplankton 3/yr, chemistry/field monthly | nutrients, for more see list in footnote (1) | SB | very close to shore, data started 2016 | yes |
| Ohio EPA | Lake Erie near City of Huron WPT Intake | 2016-present | phytoplankton 3/yr, chemistry/field monthly | nutrients, for more see list in footnote (1) | SB | in shoreline area, data started 2016 | yes |
| Ohio EPA | Lake Erie near Huron | 2011-2015 | phytoplankton 3/yr, chemistry/field monthly | nutrients, for more see list in footnote (1) | SB | close to shore, no longer being collected | yes |
| Ohio EPA | Lake Erie near City of Vermilion WTP Intake | 2016-present | phytoplankton 3/yr, chemistry/field monthly | nutrients, for more see list in footnote (1) | SB | in shoreline area, data started 2016 | yes |
| Ohio EPA | Lake Erie near Lorain | 2011-present | phytoplankton 3/yr, chemistry/field monthly | nutrients, for more see list in footnote (1) | SB | close to shore | yes |
| Ohio EPA | Lake Erie near Rocky River | 2010-present | phytoplankton 3/yr, chemistry/field monthly | nutrients, for more see list in footnote (1) | Central | close to shore | yes |
| Ohio EPA | Lake Erie near Wildwood | 2010-present | phytoplankton 3/yr, chemistry/field monthly | nutrients, for more see list in footnote (1) | Central | close to shore | yes |
| Ohio EPA | Lake Erie near Fairport | 2011-present | phytoplankton 3/yr, chemistry/field monthly | nutrients, for more see list in footnote (1) | Central | close to shore | yes |
| Ohio EPA | Lake Erie near Geneva | 2011-present | phytoplankton 3/yr, chemistry/field monthly | nutrients, for more see list in footnote (1) | Central | close to shore | yes |
| Ohio EPA | Lake Erie near Conneaut | 2010-present | phytoplankton 3/yr, chemistry/field monthly | nutrients, for more see list in footnote (1) | Central | close to shore | Yes |
| (1) Ohio EPA Parameters: Alkalinity, Bicarbonate, Carbonate, Chloride, Solids, TDS, TSS, Ammonia, Nitrate-Nitrite, Kjeldahl, Total, Phosphorus Total, Orthophosphate, Chlorophyll a, Microcysts, Field Parameters (water depth, secchi depth, pH, dissolved oxygen, temperature, fluorescence, conductivity, and specific conductance), phytoplankton as noted. | | | | | | | |

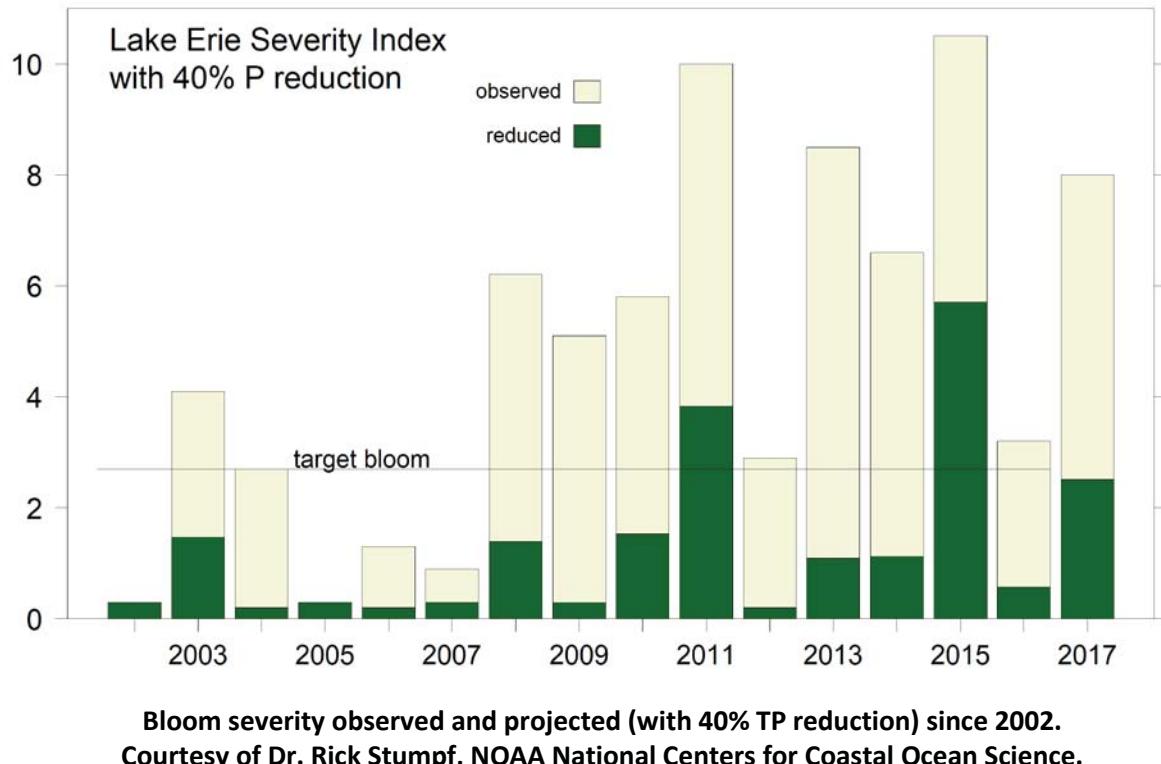

NOTES: Ohio EPA Fish and Mayfly sites were not included since no chemistry or phytoplankton samples are typically collected there. That information can be found in the study plan at: epa.ohio.gov/Portals/35/Iakeerie/2017_Erie_Study_Plan.pdf.

Ohio EPA transects for dissolved oxygen and other field parameters are not included in the table. These are collected in the central basin at various depths and locations to assist in defining/tracking the hypoxic zone - but do not include nutrients, chlorophyll or cyanotoxins.

Within each 10-day frame, an average percent coverage by a bloom at 20,000 cell/ml or greater was calculated for the western basin open water assessment unit. In the western basin blooms typically begin developing by July 22, and peak between August 10 and September 18 (Wynne and Stumpf, 2015). The 10-day time frames used in the assessment method are:

| | |
|-------------------|---------------------|
| July 1 – July 10 | Aug. 30 – Sept. 8 |
| July 11 – July 20 | Sept. 9 – Sept. 18 |
| July 21 – July 30 | Sept. 19 – Sept. 28 |
| July 31 – Aug 9 | Sept. 29 – Oct. 8 |
| Aug. 10 – Aug. 19 | Oct. 9 – Oct. 18 |
| Aug. 20 – Aug. 29 | Oct. 19 – Oct. 31 |

The threshold of 30 percent coverage is based on an examination of the bloom coverage in western Lake Erie since 2002 and what blooms were considered to meet the target severity index (based on the amount of bloom biomass over 30 days). As illustrated in the figure below, bloom severity meets the target in 2004 and very nearly in 2012. In those years the bloom was not considered to significantly impede the recreational use of the water, and the extent of coverage did not exceed 30 percent in more than three 10-day frames, as indicated in the table following the severity index figure.

The average percent coverage of blooms in the western basin open water unit with 20,000 cell count or greater for the 10-day time frames in 2004 and 2012.

| 10-day Frame | Coverage with 20,000 Cells or greater |
|--------------|---------------------------------------|
| 7/6 | 6% |
| 7/16 | 3% |
| 7/26 | 4% |
| 8/5 | 17% |
| 8/15 | 15% |
| 8/25 | 28% |
| 9/4 | 40% |
| 9/14 | 35% |
| 9/24 | 13% |
| 10/4 | 7% |
| 10/14 | 3% |
| 10/25 | 2% |

The table below shows the end results of the analysis, using the MODIS satellite data 2012-2017 and the including the full six-year window in the assessment. It should be noted that some years do not include all 12 of the 10-day frames because of extended cloud cover or other interferences with the satellite images. The western basin open waters are considered impaired as the last five years all exceeded the thresholds outlined above.

Results: The number of 10-day time frames exceeding the 30% coverage threshold (with 20,000 cells/ml or greater) in the western basin open water unit for each year beginning in 2012.

| Year | $\geq 30\%$ coverage at $\geq 20,000$ cell/ml | |
|------|---|--------------|
| | 10-day frames exceeding | total frames |
| 2012 | 2 | 12 |
| 2013 | 10 | 11 |
| 2014 | 6 | 12 |
| 2015 | 9 | 11 |
| 2016 | 5 | 10 |
| 2017 | 7 | 11 |

Since the island shoreline assessment unit is within the western basin open water unit shape file that was used to conduct the analysis, the island shoreline unit is also considered impaired.

Other Sections/Items in 2016 Integrated Report Revised by this Amendment:

Page xvi: An additional change since the 2014 report would be adding the assessment method and listing the western basin open waters as impaired for recreation based on algae.

Page D-1: Recreation use is also assessed based on algae for the western basin of Lake Erie.

Page D-2: In the past several cycles of the Ohio IR, Ohio EPA has evaluated Lake Erie using three AUs that cover the shallow waters along Ohio's coast: western basin; central basin; and Lake Erie Islands as measured from the shoreline to 100 meters lakeward; as well as the area within a 500-yard radius of active public drinking water supply intake structures. For 2016, Ohio EPA is proposing to add open water assessment units for the western basin (MI-OH state line to a line between the Marblehead Lighthouse and Pelee Point), the Sandusky Bay area (from Marblehead to Lorain Ridge), and the Central Basin area (Black River/Lorain Ridge to OH-PA state line).

Section D-3: The last three paragraphs are superceded by this amendment.

Page D-8: The bathing water use designation status of Lake Erie is supplemented by this amendment.

Page D-7: The open water units are added by this amendment.

Page D-10: Table D-2 is supplemented by this amendment.

Section D7: Many of the public comments would be addressed by this amendment.

Section F: References to "three LEAUs" throughout the section change to "three shoreline LEAUs".

Section G: References to "three LEAUs" throughout the section change to "three shoreline LEAUs".

Page H-8: The first paragraph changes to indicate that "The 124 AUs with the PDWS beneficial use include the following: 111 WAUs, nine LRAUs and four LEAUs."

Page J-16: Table J-4 is updated with the additional LEAU listing as impaired for recreation use by algae the total of number of AUs *Impaired, Need TMDL under Recreation increases to 3*, and with the addition of the open water areas, the total number of AUs *Impaired, Need TMDL under PDWS* is now 4. The values on the last row "Total Lake Erie units evaluated" should be 3,4,3,4 from left to right in the table.

Page J-19: Figure J-9 is superceded in part by this amendment. In Table J-5 total New Listings for Recreation is 265.

Section K: The western basin open water unit is included as impaired (category 5) on the Section 303(d) Recreation Use Categories Large Rivers and Lake Erie Assessment Units.

Section L3: Status of Lake Erie Assessment Units is revised and enclosed with this amendment.

Section L4: Section 303(d) List of Prioritized Impaired Waters is revised and enclosed with this amendment.

Additional Discussion

The method outlined above was developed and included as part of the 2018 Integrated Report effort and was not available at the time Ohio produced our 2016 Integrated Report. However, it is clear the western basin open water would have been listed as impaired for recreation in 2016 using this method. Ohio's 303(d) list is therefore proposed to be amended to add the recreation use impairment for the Lake Erie western basin open water based on algae, as well as add open water assessment units in the Sandusky Bay area and Central Basin area to more accurately reflect the assessment conducted there. PDWS intakes are

physically located in the open water in all three units, and the data assessed was collected around those intakes (more information about the data used for the PDWS assessments is found in Section H of the report). It should be noted that the water quality standards for Public Water Supply and thus the impairment designation only apply in the 500-yard zone around the intakes. Ohio will continue to refine the assessment units and methods, as reflected in our 2018 report. The enclosed Section L4 of the report is revised to include the open water areas and display the re-calculated priority points assigned to the shoreline assessment units.

Next Steps

The priority points in the revised list of impaired waters, while somewhat high, do not reflect the actual priority that Ohio places on the Lake Erie impairments. In short, the western basin in particular is one of the highest, if not the highest, priority for Ohio to address. Ohio has been and plans to continue addressing its contribution to the problems in Lake Erie through: nutrient TMDLs on tributaries; numerous state initiatives to reduce nutrient loads from Ohio in accordance with the Domestic Action Plan; and active participation on Annex 4 (Nutrients) and other Great Lakes Water Quality Agreement (GLWQA) efforts. Effective lake management and coordinated implementation are needed to address the western basin of Lake Erie algal blooms and the Central Basin hypoxia issues, requiring a multi-state and binational effort. Currently, there are many parallel planning and management efforts ongoing at the state, federal and binational level. For the open waters of Lake Erie, respecting and working through the binational governance framework is the appropriate process and Ohio intends to aggressively pursue state measures that complement the process and are neither duplicative nor contradictory.

The State of Ohio's Domestic Action Plan expanded upon the *Collaborative Implementation Plan* and was submitted to U.S. EPA on Feb. 7, 2018. The commitment to meet the Collaborative Agreement phosphorus reduction goals of 20 percent by 2020 and 40 percent by 2025 was also incorporated into this plan. The plan is not intended to static but to be revised following the adaptive management philosophy.

(lakeerie.ohio.gov/Portals/0/Ohio%20DAP/DAP%201-0%20Final%20for%20USEPA%202018-02-07.pdf).

Given the complexity of the algae bloom problem, Ohio believes the best approach for solving the issues in western Lake Erie is through the collaborative process established under Annex 4 of the Great Lakes Water Quality Agreement and the Domestic Action Plans as they afford a holistic, multi-jurisdictional perspective that does not exist in a traditional TMDL process. If the current collaborative processes fail to restore the designated use attainment we recognize that a TMDL or other approach allowed by the USEPA to address impaired waters under the CWA will ultimately be required.

Ohio fully intends to continue collaborating with the researchers and U.S. EPA to refine and add to our assessment methods for Lake Erie, as demonstrated and discussed in the draft 2018 Integrated Report that was public noticed on March 22, 2018. In the 2018 report, the assessment units are better defined, and the priority points more accurately reflect the importance that Ohio places on the impairments in the Lake. As noted in Section I of the 2018 report, Ohio anticipates that other metrics will be developed (e.g. microcystin concentration thresholds) and all areas of the lake will be assessed for all the established use designations when the appropriate metrics, sampling protocols, and datasets are available.

Section I3. Status of Lake Erie Assessment Units

| Assessment Unit | Assessment Unit Name | Human Health | Recre-ation | Aquatic Life | PDW Supply | Priority Points | Next Field Monitoring |
|-----------------|---|--------------|-------------|--------------|------------|-----------------|-----------------------|
| 24001 003 | Lake Erie Islands Shoreline | 5 | 5 | 5 | 5 | 10 | 2018 |
| 24001 002 | Lake Erie Central Basin Shoreline | 5 | 5 | 5 | 0 | 9 | 2018 |
| 24001 001 | Lake Erie Western Basin Shoreline (including Maumee Bay and Sandusky Bay) | 5 | 5 | 0 | 9 | 9 | 2018 |
| 0410202000301 | Lake Erie Western Basin Open Water | 3 | 5 | 3 | 5 | 8 | 2018 |
| 0410202000302 | Lake Erie Sandusky Bay area Open Water | 3 | 3 | 3 | 5 | 5 | 2018 |
| 0410202000302 | Lake Erie Central Basin Open Water | 3 | 3 | 3 | 5 | 5 | 2018 |

Section I4. Section 303(d) List of Prioritized Impaired Waters

| Assessment Unit | Assessment Unit Name | Sq. Mi. in Ohio | Human Health | Recre-ation | Aquatic Life | PDW Supply | Priority Points | Next Field Monitoring |
